TENANT GOVERNANCE
IN MICROSOFT ENTRA

- **Why Multi-Tenant Governance Matters**
- **Introducing Tenant Governance**
- **Implementation Deep-Dive**

WHY MULTI-TENANT GOVERNANCE MATTERS

REALITY CHECK: ONE TENANT PER COMPANY?

Why Organizations Operate Multiple Tenants

- **Regulatory & Data Residency**
  - Separate tenants required for data sovereignty or regional compliance
- **Isolated Identity & Workload Environment**
  - Separate tenants required for isolation of identities (e.g., customers, partners or school accounts) or resources
- **Staging, Dev & Test Environments**
  - Isolated tenants for development, testing, and pre-production workloads
- **Mergers & Acquisitions**
  - Acquired entities bring their own tenants requiring integration
- **Shadow IT & Uncontrolled Tenant Creation**
  - Employees or project teams creating tenants without IT oversight

Wake up call: Midnight Blizzard

IMPLEMENTATION DEEP-DIVE

WALKTHROUGH TG FEATURES

Discovery of (Related) Tenants

B2B Collaboration/Service providers	Multitenant Applications	Shared Billing Accounts
Inbound/outbound guest registrations and sign-in activity via B2B/Service Providers Surfaces: partner, vendor, and shadow tenants	Apps with permissions in your tenant or vice versa Surfaces: SaaS providers and internally shared apps	Tenants connected through shared commerce billing Surfaces: organizationally affiliated tenants

Metrics appear as orders of magnitude (not exact numbers) to protect user privacy

Discovery is awareness-first: not every related tenant requires governance action

Not enabled by default!

TENANT DISCOVERY

DEMO

Tenant Governance Relationship

Step 1: Invitation	Step 2: Request	Step 3: Accept
Governed tenant sends governance invitation to governing tenant	Governing tenant sends request back, selecting a governance policy template	Governed tenant reviews and accepts the request = relationship established

Note the direction: Governed tenant initiates → Governing tenant responds → Governed tenant confirms

⚡ Shortcut: If tenants share a billing account, the governed tenant can skip the invitation step

By default, sending invitation is disabled!

TENANT GOVERNANCE RELATIONSHIP

ENTRAOPS REPORTING

DEMO

Unified Tenant Configuration Management (UTCM)

Configuration-as-Code platform
for all Microsoft Clouds

Supports configurations for seven
of the major M365 Workloads

Works for organizations with 1 or 1,000+ tenants

Exchange Online | Entra Id | Intune | Purview | Defender | OneDrive/SharePoint | Teams

IMPLEMENTATION DEEP-DIVE

Configuration Management & Monitoring

BASELINE

JSON document defining desired state of tenant resources

SNAPSHOT JOBS

Capture current state as JSON; can bootstrap baselines; 7-day retention

MONITORS

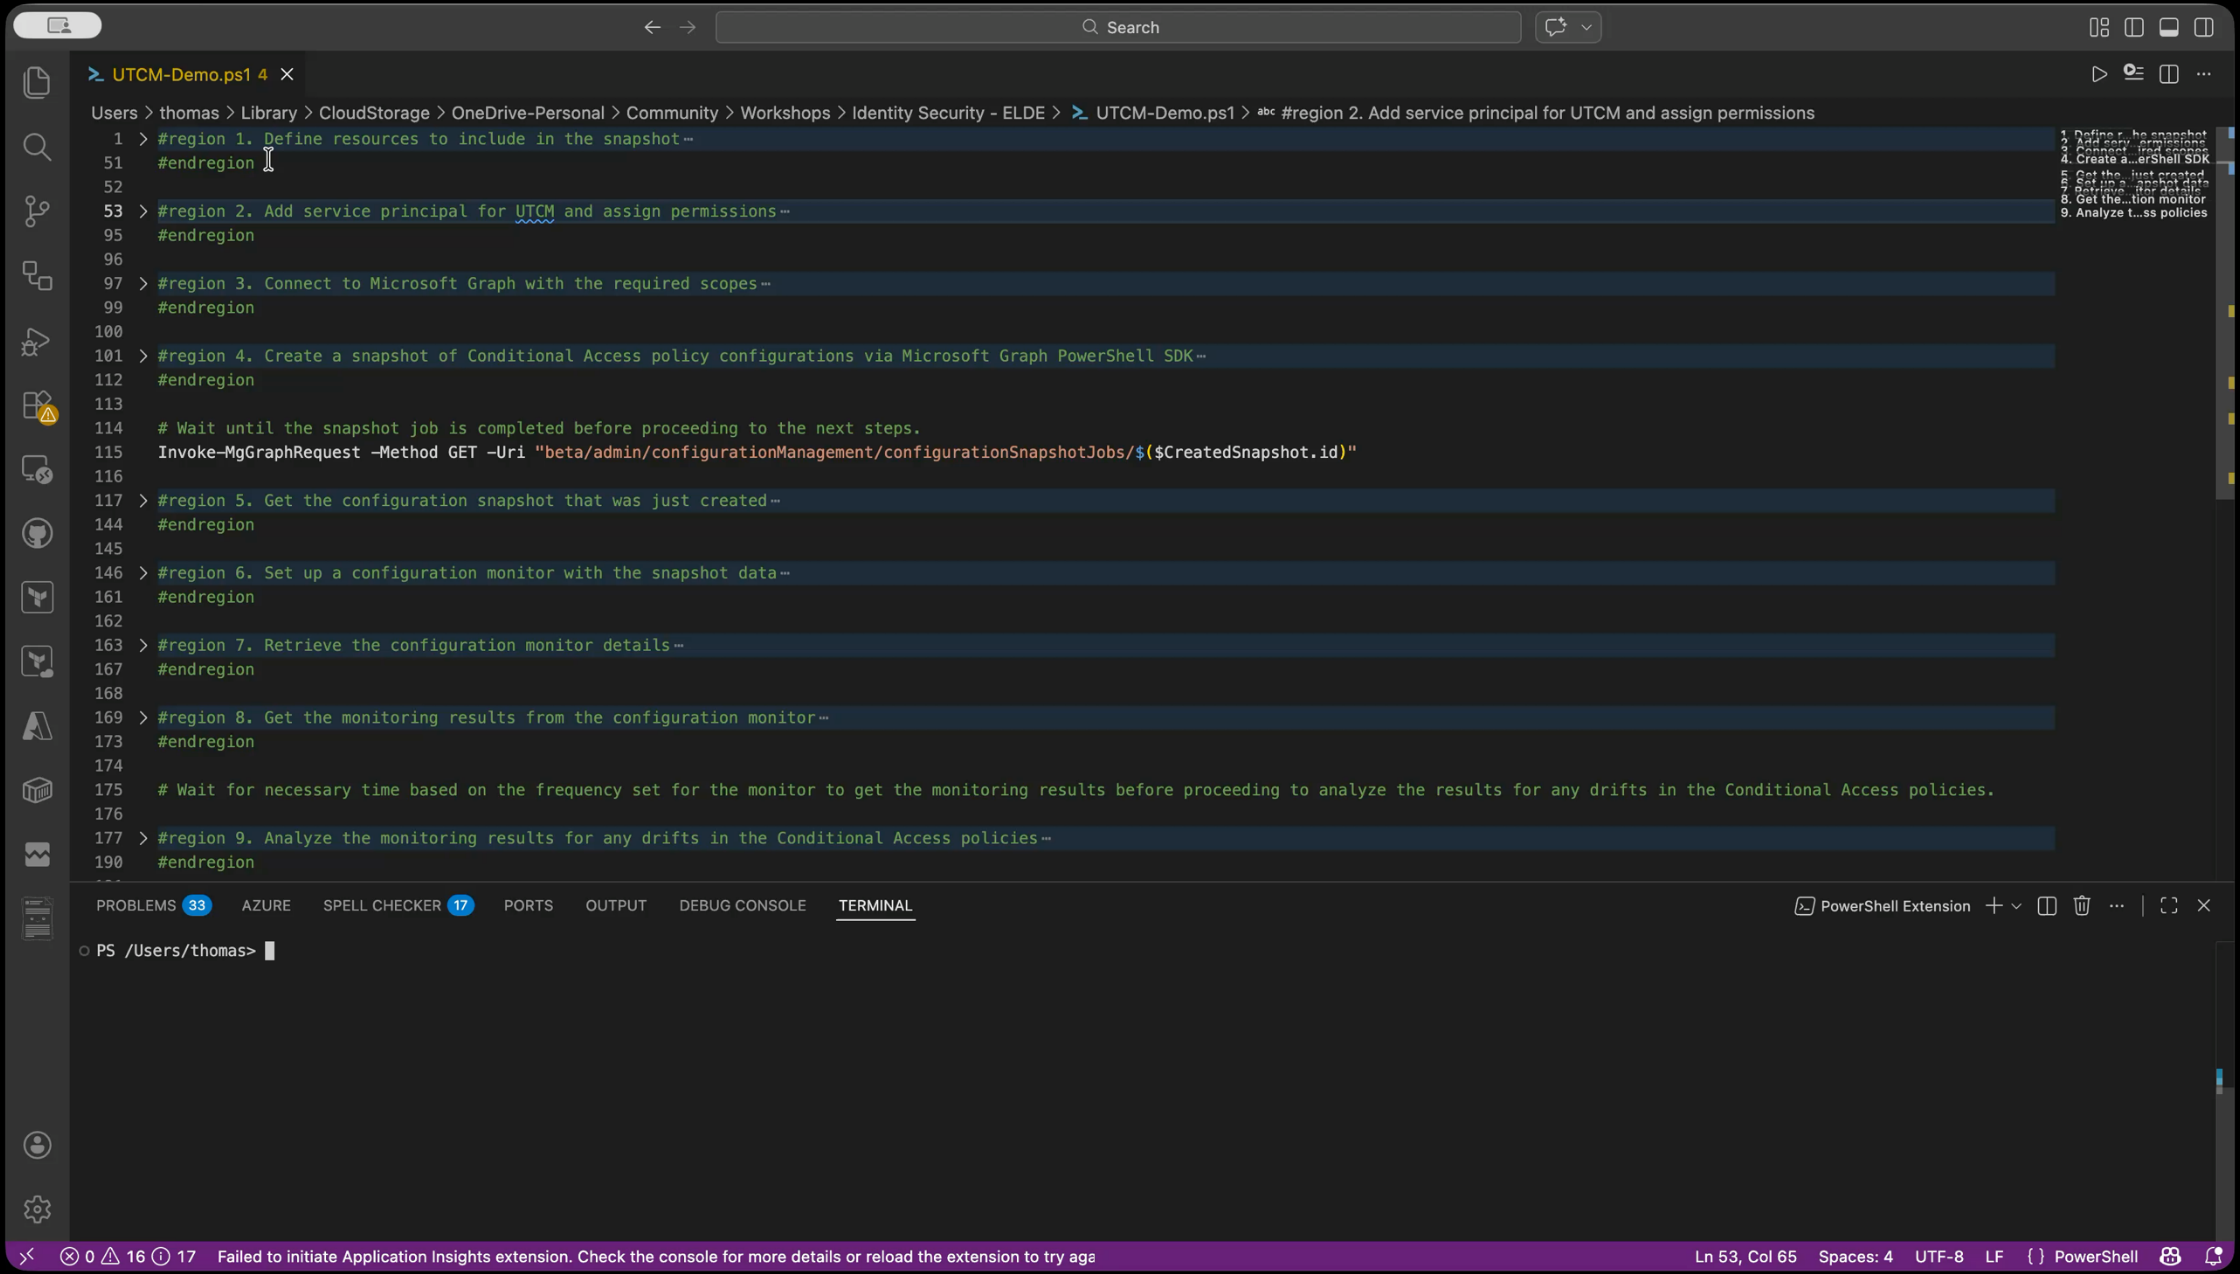
Run on 6-hour schedule comparing actual state against the baseline

DRIFT DETECTION

Property deviations flagged; automatically marked as 'fixed' after remediation

6 Services: Entra ID | Intune | Exchange Online | Teams | Purview | Microsoft Defender — 200+ resource types

Step 1: Configure Service Principal and create Snapshot Job



A FEW
MOMENTS LATER

Waiting for completion of Snapshot job

SAMPLE SCRIPT

HOME WORK / FOR YOUR LAB TIME

TENANT CONFIGURATION PORTAL UI

DEMO

Limitations

No Cross-Tenant Configuration Management and Monitoring

Monitors must be created per-tenant individually. No unified interface to configure baselines across tenants at once.

No Auto-Remediation for Drifts

Monitors operate in **detect-only mode**. Drifts are reported but not auto-remediated. Admins must manually fix each deviation.

Limits on Check Intervals

Monitors run on a fixed **6-hour interval**. No real-time or custom-schedule checks. Configuration drifts can go undetected for up to **6 hours** before the next scheduled evaluation.

Limits on Number of Resources

Each baseline supports max **200 resource instances**. The overall daily limit is **800 resource instances** across all monitors per tenant. Exceeding this quota blocks new monitors.

THANK YOU!
